

"When it was time to upgrade our equipment, we explored all the alternatives. The mechanical shears were, in the end, the only way that we could achieve the speed that we needed for our production levels. Hydraulic shears just could not keep up with the full length cut speed that a pure mechanical could cycle. We were very pleased to find out that Wysong is now remanufacturing this equipment. It made the decision an easy one; we upgraded one to a new rebuild, and got another rebuilt that we currently owned. It has been one of the easiest decisions I have had to make on an equipment purchase."

Darrell Wade, Shop Foreman-Pierce Associates Inc.

LONGEVITY

Nodular Cast Iron Frames For Superior Durability

Exceptionally durable nodular cast bed, ram and end frames are shock dampening to provide the ultimate resistance to vibration and deflection. Nodular Iron is the secret to the Wysong shear's ability to maintain alignment for capacity shearing in large volume production.

Greater Floor Pad Area

Greater floor pad area on Wysong shears reduce square inch loading.

Cam Brake Assembly

Cam operated brake assembly is activated at the top of stroke only, eliminating drag and assuring years of trouble-free operation.

**IF YOU NEED
SHEAR DURABILITY**

ACCURACY

Engineered for Performance

Wysong shears have been engineered to produce minimum twist, camber and bow, even on narrow material.

Superior 9-Jaw Clutch and Drive Unit

A superior gear train with interlocking nine jaw clutch ensures years of operation without replacement.

Spring Activated Holddown

Automatic compensating holddown is standard on all Wysong power shears. Compression springs self-adjust for different thicknesses of material.

**IF YOU NEED A
WORLD CLASS MACHINE TOOL**

EFFICIENCY

Ease of Blade Removal

Blade removal is quicker and easier from the front and rear of the machine. Accessible blade bolts make it easy to turn blades.

Blade Adjustment

Fast, simple setting of blade clearance is assured through Wysong's three point blade adjustment.

Singular Blade Setting

Wysong shears cut a wide range of materials and thicknesses with one blade setting.

A 1/2 degree blade incline provides clean, burr free edges on sheared material.

Control Options

Your choice of a power backgauge or a 3-Axis CNC gauging system.
